Ketron SD-4 New Sound Module

The newest sound module from Ketron is the SD-4. It has the same sound engine as it's big brothers, SD-3 & 5 module and keyboard, but without an arranger, (drums and backgrounds). This 2 pound package has 3 separate sections, treble, chords and bass. The 3 sections can hold the individual sound, volume and octave for the 3 parts. A 2 or 3 digit number can be assigned from memory

positions 64-128 to memorize the settings. With merely that number your memories are called up. The first 64 memories are preset by the factory. The user has 512 sounds located in 3 music banks and 1 special bank to choose from. The unit features reverb, chorus and a multi-effect DSP for adding ambience. The unit also features drum loops for sequencers. This unit has 2 line outs

and features a headphone jack, 2 USB ports, 2 Midi in and 1 Midi out jack. Real time volume controls are on the outside of the unit with a 3 digit digital readout for the location numbers. This unit improves upon the SD-2 which is only a sound module without controls. This unit allows the user to use it without a memory midi controller, opening up the possibly for all Midi units.

Yorkville Keyboard Amps-Wow!

Earlier this year, Yorkville introduced 3 new keyboard amps that blow away the competition. These small, powerful workhorses are absolutely amazing for their power, full range sound and compactness. The smallest is the K1, 3 channel amp featuring 120 watts with a 10" woofer, and a 4.75" high frequency driver. This 30 pound amp has a link feature to connect 2 together to form a 6 channel 240 watt stereo system! The K2 is mid

size 200 watt 3 channel keyboard amp with a selectable tube/solid state input and voicing circuitry to adjust the tone pallet. The first 2 channels have volume, bass, midrange and treble controls. This 44 pound amp has a 3 way speaker system, 10" woofer, 4" mid and 2.5" high frequency drivers. This mid size unit has such clarity and power, it'll make you shake your head. The 3rd unit released is the K4 300 watt, 3 amplifier unit with a 12" woofer, driven by 1

amp, while a pair of amps drive the dual 4.5" mid and 2.5" high drivers. It features the tube/solid state preamp choices, XLR in and outs, and true stereo with 4 sets of stereo inputs. All of the units can be used straight up or like monitors, wedge shaped. The K1 & 2 have integrated stand mount adapters built in. The K4 has dual fans to keep it cool. These North American built units are of the highest quality and sound great!

MAP Pricing Mystery Explained

Many of our manufactures and distributors are now using MAP pricing. MAP stands for Minimum Advertised Price. That is the lowest price that a dealer can advertise in print, (internet, newsletter or TV/radio advertising) for that particular product. Some of the products in our advertising are at MAP standards. So if you call or write us there may be a better price available

for that item. Dealers that advertise MAP priced items below that, are at risk of losing their dealership. If you see an item you are interested in, check with us first to find out what the best price is. Sometimes this can be confusing, but it's purpose is to keep all dealers on an even playing field for the customers. MAP does not pertain to items bought with trade in

equipment or what the item is actually sold at in the store. Pricing on some items, even in this newsletter, are for comparison use only, not the price you pay. We always offer free shipping on most items over \$50, except for oversize, overweight and multi-carton products. The best price is only a toll free call away @ 888-452-9369 or remember 888-4JAYFOX.

"We already have customers on a waiting list for these, so contact us if you want to be the first to own one of the best in the world!"

Audya Keyboard from Ketron is coming !

In the near future, one of the most advanced music station keyboards will be introduced from Ketron called the AUDYA. This 76 note semi weighted keyboard will be the flagship unit for the company with all of the latest technologies included. Here are some of the features: Large color graphic display, Stereo Live Drums (Wave), real acoustic &

electric guitars plus bass accompaniments, USB ports, 2 XLR microphone inputs for the new advanced Voicetron harmonizer/vocoder with pitch correction. The unit also has up to 4 separate outputs without losing internal effects. There are 17 slider volume controls and 10 assignable tabs. An 80 gig hard drive will hold Wave, Midi and MP3 files. The built in recorder

will convert your music and voice to MP3 format to be saved on disk. The recorder can record 2 track stereo directly to disk. The video interface will work with PAL, NTSC & Super VHS and the unit has auto voltage detection from 110 to 240 volts. We already have customers on a waiting list for these, so contact us if you want to be the first to own one of the best in the world!

Stick it in your ear and kick your own butt?

For better monitoring of your performance, use in the ear monitors instead of traditional floor monitors or standing near your amp or PA. Not only do you get your own mix but it never varies from gig to gig. Some of the very low

frequencies are lost because of the size of ear monitors, but you can gain it back by a product from Guitamer Co. called the Butt kicker. You attach it to the bottom of your chair, or attach to a floor platform your standing on

and only the low frequencies such as bass and kick drum are passed through vibration to your body that you can feel, without losing any hearing from a speaker. These work very well, and I use them myself in my own band.

We're on the Web!

See us at:
www.jayfoxband.com

If any of the new technologies are confusing, call us for a live free consultation of your needs and the equipment available from us. The new gear can reproduce sound more accurately, faster and with a greater ease than just a few years ago.

We've produced our own Instructional videos with rewritten owners manuals on many instruments and pieces of gear and keep abreast of industry changes and products that can make your performance less stressful and more amazing.

Don't get caught in the

last century with your outdated equipment, sell, trade in or consign that equipment that you are not using anymore and turn it into cash for something more productive. The only thing holding you back is you!

Repairs & Customization Services

We do accordion tuning, reed replacement, bellow repair, felt and leather replacement on all accordions. On the brands we sell we repair electronics and install midi on most acoustic accordions.

If you are looking for a customized case or cover, contact us with dimensions and style. We can have a case for any item made to your specs including ATA flight cases.

If you need a custom

length cable or a group of cables made into a snake, we can produce it with any type of connector, with the length and number of conductors you need all neatly bundled into one easy to handle package.

About Our Organization...

We accept Visa, Master Charge, Discover and American Express along with cash or check for payment.

For demos and repairs,

call ahead for appointment times so that we can spend an uninterrupted time just for your needs.

Most items over \$50 qualify for free shipping,

except oversize, overweight and multi box items.

If you enjoy talking music equipment, we have the expertise and tech support available!
