EWA- ELECTRONIC WIRELESS ACCORDION

The newest digital accordion on the market is the EWA from SUONI (formally SEM). This 14 pound accordion has 2 treble sections along with chords and bass. True diversity Wireless on 8 different channels is standard on this model along with wired playing with a cable. There are over 160 accordion sounds among the 500 sounds built into the accordion. The small

module has 3 jacks for footswitches, a volume pedal and a headphone jack. The accordion has 128 memory banks to hold all the sounds, volumes, and octaves for each combination. You can use the Midi dump feature so that your memories can be saved or reloaded from a computer. Other new features include 2 chin switches located on the top frame of the accordion to select different memory

sounds remotely with your chin and never take your hands off the keyboard! The right and left sections have independent control for bellow sensitivity. One can accent, crescendo, decrescendo and even bellow shake easier than before. No other digital accordion offers these features and quality for the price of this unit. Try it to believe it!. This is the future of electronic accordions.

KETRON AUDYA KEYBOARD IS HERE!

Earlier this year, Ketron released their much anticipated keyboard called the Audya. This keyboard's technology is far advanced over past units and other brands on the market. To achieve this performance level, they have recorded live drums, bass and guitar in a studio jam session and recorded it to the hard drive. When these patterns are recalled, the keyboard plays them directly from the hard drive in any tempo, key or midi instrument to give an

unprecedented quality to the arrangement. No other keyboard has this technology. The Audya's massive 80 gig hard drive, can play simultaneous MP3, Wave, or Midi files and combine them with Midi clock sync functions making it able to use one drum beat and connect it to a song on the fly. The 76 note semi weighted keyboard has 6 outputs to divide it's sections on multiple outs to a mixer or amp. Ketron has included a professional 5 voice vocoder built into the unit,

with digital effects and pitch correction! It has the ability to connect to a computer via 2 USB ports for quick up or downloading of files. Audya can record your music and voice directly to an MP3 file internally and detects all voltages automatically around the world. We have made a 90 minute instructional DVD for this unit and a rewritten owners manual. The Audya is truly top of the line. Since it's inception, it continues to be a hot seller.

New Unpowered mixers from Yorkville & Alto

Yorkville has introduced an unpowered mixer, the MC12D. This unit has all the great features of the PowerMax line, except it is unpowered in a small package. The features include: sweepable mids on every channel, dual monitor sends, soloing, muting, dual effects sends and auxiliary sends. Each of the first 8 channels has an insert point for sending and returning to an

external processing unit. LED metering with a digital effects unit built in is standard and a BNC lamp mount. Plenty of ins and out jacks are available for any combination you might need.

The Alto line of unpowered mixers distributed from Yorkville, have a lot of great features. These include sub groups and even USB

recording directly to a computer. These units are available in 8 channels all the way up to 20 channel configurations in a light weight package.

If you are looking for an additional few channels for a keyboard amp or an existing mixer, try one of the small 8 channel mixers that are about half the size of a briefcase. Don't dispose of the old, add to it with one cable!

Call us before you buy for any special pricing or bonus items being offered on our products!

KETRON ventures into the PA world

Ketron has introduced their own brand of PA equipment which match the Module and keyboards they produce. The speaker cabinets feature built in amps and volume controls. The subwoofers have built in amps made by Bang & Olufsen with crossover networks built in. Only low frequencies travel to the subs and the rest of the frequencies pass through to the main

upper speakers. These speakers feature mounts for pole mounting, handles and a smooth painted finish. The upper speaker model MB10 has 2 amps, one 50 watt for the horn and a 250 watt for the 10" woofer. The speaker weighs 37 pounds and has dimensions of 18"x13"x12". The powered subwoofer model SK12A, has a 12" woofer with 400 watts RMS

power. The dimensions are 14"x14"x24" and it weighs 44 pounds. The subwoofer is available in an unpowered version known as the SK12 with the same 12" woofer, but only weighs 34 pounds! These speakers have XLR or speakon connectors to hook up to your favorite mixer. Give us a call to discuss your future needs!

Protect your investment with covers and cases

Custom covers and cases are available in any size and variety of color. We offer 3 levels of covers from non padded, to 1/4" and 1/2" foam backing on Cordura nylon to protect speakers. Unitec produces hard cases with

either surface mount hardware and ozite coverings, or ATA flight cases. Plywood is covered in ABS with all aluminum tongue and groove edges and recessed handles and latches. The padded

interior is foam lined with Durafelt. These cases offer the ultimate protection for your quality product. Call us with your length, width and height dimensions and we can have a cover or case custom fit for any type of use and price range.
